SUMMARY

AI-native Product Manager with experience across consumer mobile products, payments, growth, and AI-powered operational systems. Specialized in transforming complex workflows into scalable product systems through automation, experimentation, and data-driven decision-making. Experienced in monetization, evaluation frameworks, AI workflow orchestration, and building products that improve operational leverage at scale.

WORK EXPERIENCE

Product Manager / AI Operations | XGX

Feb 2026 – Present

- Diagnosed the root cause as missing feedback infrastructure, with issues logged manually and scattered across Discord, Google Play, App Store, and support tickets with no aggregation. Navigated a three-way misalignment between CS, Community, and Engineering to secure buy-in for a centralized feedback database, shifting Engineering's prioritization from instinct to evidence.
- Designed and shipped a production agentic feedback platform in two months, processing 10,000+ feedback items and 8,600+ replies across channels. The platform let a single operator cover what previously took a 3-person support and community team, a 67% headcount reduction with no loss in coverage or quality.
- Architected the system around a contained pipeline (ingest → classify → recover), using semantic similarity search and RAG to ground classification in feedback history, with an LLM reasoning layer. Defined inputs, outputs, and fallback behavior for each stage so misclassifications were rerouted rather than dropped.
- Solved prioritization through classification, deduplication, clustering, and routing: deduplication rose from 22% to 54%, cutting redundant engineering tasks by 40%. Real-time escalation replaced 7-day review cycles, while clustering surfaced chronic issues Engineering had never had visibility into.
- Treated AI evaluation as a product discipline, running offline experiments, confusion-matrix reviews, and human-feedback loops at every stage to sustain a 99.2% approval rate on AI-generated replies while preserving human tone across first-contact and follow-up.

Product Owner | DK Tech Group

Feb 2025 – Feb 2026

- Led end-to-end product development across four mobile applications (AI Fitness, AI Productivity, Expense Tracker, Camera), owning discovery, prioritization, launch, and iteration.
- Applied generative AI to personalize onboarding and engagement workflows, increasing activation and driving a 15% relative uplift in D7 retention (26% to 30%).
- Optimized monetization strategy and in-app purchase funnels, achieving 8% install-to-paid conversion, outperforming common industry benchmarks.
- Built unit economics frameworks across CPI, CAC, and LTV to evaluate scalability and identify acquisition risks, influencing retention-first and organic growth strategies.
- Designed lifecycle experiments and segmentation strategies that stabilized retention at 28–32% W1 and 17–20% W2, improving long-term revenue predictability.
- Improved release velocity by 25% through stronger cross-functional collaboration across engineering, design, and product planning.

Customer Success | Open Commerce Group

Feb 2023 – May 2024

- Managed 150+ monthly merchant interactions, developing a comprehensive understanding of the e-commerce platform's core mechanics, payment flows, and deeper customer insights.
- Acted as a crucial link between users and the product team by accurately capturing customer pain points and translating them into structured tasks and detailed bug reports for Product Managers.
- Gained practical exposure to the software development lifecycle by closely tracking task resolutions, observing PM workflows, and monitoring feature releases to understand how user feedback drives product iteration.
- Streamlined the feedback loop from frontline support to technical development, ensuring issues were clearly communicated and efficiently handed off for investigation and fixing.

EDUCATION

University of Illinois at Urbana-Champaign | Marketing

2021 – 2025

SKILLS

Product Development: Agile/Scrum, product roadmapping, backlog prioritization, unit economics (CPI, CAC, LTV), retention optimization

AI Integration: LLM Orchestration, AI Workflow Design, Agentic Systems, Prompt Engineering, Human-in-the-loop Systems, RAG, Evaluation Frameworks, Workflow Automation, AI Product Development, AI Operations

UX/UI & Front-end: Figma prototyping, interactive demo development (HTML/CSS/JavaScript)

Analytics & Tools: Firebase, Jira, Zendesk | Conversion optimization, A/B testing

CERTIFICATIONS

PSPO-I (Professional Scrum Product Owner - I), 2025

Generative AI with Google, 2025

Product Management: Building AI-Powered Products, IBM, 2025

Google Project Management Professional Certificate, 2024

Google UX Design Certificate, 2024

Product Management Essentials Champion, 2024

HONORS & AWARDS

Team Player Of The Year, OpenCommerce Group, 2024

Product Management Essentials Graduation Project, AIESEC x Base.vn, 2024
